

INSTALLATION VIDEO and WRITTEN INSTRUCTIONS P/N E330-0300-0505 Panel Mount Hour Meter

**GENUINE OEM
REPLACEMENT**

Direct Replacement for Toro Part No. 139-6404 Time Cutter

STEP 1:

Locate factory cut-out in panel of dashboard. This will be covered by a decal. You can feel cut-out below decal with your finger. See Pic A.

STEP 2:

With a razor blade or knife trace cut- out pattern and cut away the decal so the hole is exposed.

STEP 3:

Locate female packard clip in wire-loom just below cut-out hole. Remove zip-tie so clip will go up through hole in panel. Plug clip into back of meter. Pic B.

STEP 4:

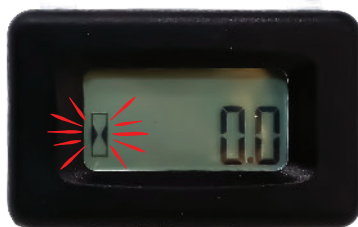

Turn key on to test and start engine. Hour glass icon in the corner of meter should blink when key is on or engine is running. It will take 6 minutes of running to record .1 on the meter. Pic C.

STEP 5:

Push meter down into dash so it is flush in dashboard. (Pic D.) Use included maintenance log book to record services.

IMPORTANT: You must be sitting in the seat of the mower when the engine is running for the meter to count hours. Your seat has a micro-switch to the engine to acknowledge a rider.

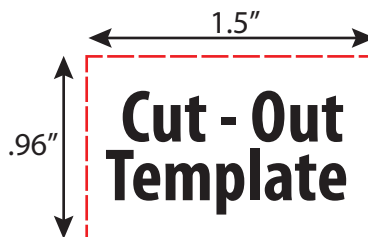

Pic C.

.1 = 6 minutes.
60 minutes/ hour = 1.0
